ALPEN-ADRIA UNIVERSITÄT KLAGENFURT

INVITATION TO THE DOCTORAL SEMINAR

Free Boundary Problems of Fluid Flow and Fluid-Structure Interactions

Amjad Tuffaha | American University of Sharjah, United Arab Emirates

Chaired by Barbara Kaltenbacher | Department of Mathematics

Wednesday, 23 November 2022 | 11:00–12:00

N.2.35

ABSTRACT

In this talk, we will give an introduction to free boundary problems of partial differential equations involving the Navier-Stokes and the Euler Equations on an evolving domain with a particular emphasis on systems of fluid-structure interaction involving the Euler or the Navier-Stokes equations coupled with elasticity or plate equations. In the last part of the talk, I will present our latest work on well-posedness of a free boundary model of inviscid flow-plate interactions.

We hope to see you there!
