ABSTRACT

My work placement took place at the flex Althofen more precisely at the department of new product introduction, where I dealt with the re-definition of the process of implementation of new bill of materials for new products (BOM-Introduction). The goal is to create a more efficient, digital and save business process. The re-definition also considers side-processes that are affected by or have adverse effects on the main process. The new process will be documented in a work-instruction which will be implemented in the companies Quality Management System.

We hope to see you there!
