ALPEN-ADRIA UNIVERSITÄT KLAGENFURT

INVITATION TO THE PRESENTATION ABOUT THE WORK-PLACEMENT

Real-time wireless channel simulation in V2X scenarios: My internship at AIT

Benjamin Rainer | Universität Klagenfurt

Chaired by Barbara Kaltenbacher | Department of Mathematics

Monday, 15 April 2024 | 10:00–10:45

N.2.35

ABSTRACT

This work placement revolved around exploring the intricacies of wireless communication for Vehicular-to-Everything (V2X) communication systems. V2X communication is a critical component of modern transportation networks, enabling vehicles to exchange data with other vehicles, infrastructure, pedestrians, and the cloud in real-time. A primary focus of this placement was to increase the real-time capability of an existing geometry-based stochastic channel model (GSCM) for modeling wireless communication channels in V2X scenarios. I will present the advancements made during my internship at the Austrian Institute of Technology GmbH.

We hope to see you there!
