🕒 1:00 p.m.

## Abstract

Non-unique factorization of elements into irreducibles has been observed in the ring of integer-valued polynomials and its generalizations. A particularity of non-unique factorization domains is that there is in general no saying how the powers of an irreducible element factor. From a factorization-theoretic point of view, one therefore wants to identify those elements among the irreducibles whose powers factor uniquely—a concept that lies between irreducibility and primality. We call such elements *absolutely irreducible*.

In this talk we discuss how to recognize absolutely irreducible integer-valued polynomials using a combination of algebraic and number-theoretic techniques.

Clemens Heuberger and the Department of Mathematics look forward to seeing you at the talk!
