

INVITATION TO A TALK

Dipl.-Ing. Dr. Manfred Madritsch

Université de Lorraine, France

“Limit Theorems for the Length of a Random Partition”

📍 N.2.35

📅 Wednesday, 28 August 2024

🕒 3:00 p.m.

Abstract

Our talk starts by introducing restricted and unrestricted partitions of an integer. Among the various ideas, we choose the saddle point method to obtain an asymptotic formula for the number of restricted partitions. Using this example we provide an overview over the established results and their issues. We then adapt the method to obtain limit theorems for the length of a random partition. This talk ends with a discussion of recent results, current projects and some open problems.

Clemens Heuberger and the Department of Mathematics look forward to seeing you at the talk!
