"My internship at KEW"

V.1.01 Friday, 31 January 2025 10:00 a.m.

Abstract
Forecasting the to be expected amount of gas consumption plays a crucial role for energy providers. During the my internship at the KEW, my task was to rework the already existing prediction methodology. Using historic data customers were classified as one of several predefined types. With this classification the new prediction methodology was put into practice. This talk will contain some more details on how this process was realized and a few of the faced challenges.

Albrecht Gebhardt and the Department of Statistics look forward to seeing you at the talk!
