N.0.07

ABSTRACT

The talk will present the outcomes of my recent internship project conducted at Infineon Technologies IT-Services GmbH. The focus of the project was the development of a web-based application aimed at enhancing data visibility, understanding, and decision-making within IT management. Throughout the presentation, I will outline the technical concept behind the solution, while also providing a broader overview of the typical project lifecycle at Infineon - from initial idea and planning, through development and data analysis, to the final implementation of the application. This session will highlight key milestones, challenges encountered, and the solutions developed during the process.

We hope to see you there!
