# Invitation to the Presentation about the Workplacement

**Philipp Daniel Hanschitz, BSc**
University of Klagenfurt

**"Enhancing Smart Meter Replacement Planning with Power BI"**

N.1.42 | Wednesday, 25 February 2026 | 10:45 a.m.

## Abstract

This presentation provides an overview of my internship at Kärnten Netz GmbH, where I worked in the Dispatcher Department, which is responsible for managing all electricity meters and coordinating the assignment of field technicians. The main focus of my internship was a project related to the replacement of conventional electricity meters with smart meters that automatically transmit consumption data to Kärnten Netz GmbH. My primary task was the development of a Power BI report designed to support and accelerate the selection of meters scheduled for replacement. The report enables a more efficient and data-driven planning process, contributing to improved organization and execution of smart meter installations.

Benjamin Robinson and the Department of Statistics look forward to seeing you at the talk!
