"My internship at Infineon"

N.2.01 | Wednesday, 25 March 2026 | 9:00 a.m.

Abstract
In 2024, Infineon developed a code to determine the lifetime variation of their microchips. My task during the internship was to implement this code on servers and test it for correctness. I also had to implement additional functions, including an error system, to ensure the code functioned correctly in case of errors. During the internship, I used the programms R and CEDA/Cornerstone. In this presentation, I will explain how I solved the tasks and what problems I encountered during the internship.

Albrecht Gebhardt and the Department of Statistics look forward to seeing you at the talk!
