Thursday, 21 January 2021

10:00 a.m.

Abstract
The workplacement took place in the department of non-life insurance at the Kärntner Landesversicherung, where mainly two bigger topics were covered. The first main topic included the determination of a major loss limit for various lines of insurance based on historical data. The second topic was natural catastrophes. Here, the question was what a natural catastrophe is and how they are modeled in insurance.

Michaela Hitz and the Department of Statistics look forward to seeing you at the talk!
